Town of Mount Washington, MA

Community Stewardship Project - Reference Guide

The Town of Mount Washington has been awarded a Community Forest Stewardship Grant through the Massachusetts Department of Conservation and Recreation (DCR). The purpose of the grant is to address the invasive species threat to our community.

The main goal of the project is to complete a Forest Stewardship Plan that will provide the database for ongoing grant funding for improved engineering and maintenance of Town Roads using nature-based solutions to control storm water runoff and invasive species proliferation.

The main objectives are to map town-owned property and roadways and implement **community engagement and participation.**

After many Town's people have shown an interest and to provide some clarity, please find attached a Reference Guide to what you can do to help this project.

If you have any questions, please contact Mack Waggaman of The Conservation Commission by returning email or at mwaggaman@townofmtwashington.com.
